SAVING ENERGY ISN'T THE QUESTION. IT'S THE ANSWER.

Why should a car park or stairwell be lit around the clock when nobody needs the light?

Permanent lighting wastes valuable energy. The FIPOI Foundation, owner of the car park on Place des Nations in Geneva, was looking for an environmentally friendly, energy-efficient and sustainable lighting solution – and found it at nevalux AG.

Since the renovation with modern, attractive luminaires, the car park has benefited from a sensor-controlled solution with networked lighting and intelligent switching. This ensures excellent illumination of all areas. We replaced the old fluorescent tubes with over 700 Steinel RS PRO Connect 5100 SC luminaires, which are wirelessly connected and suitable for integration into the existing Zumtobel Tecton rails. In addition, 85 Steinel RS Pro R20 Basic luminaires ensure safety in the stairwells. Thanks to invisible HF motion detectors and neighbour monitoring, the light leads the way. Once nobody is left in the car park, the light switches off automatically after an individually adjustable run-on time.

Energy efficiency? Not a buzzword, but a matter close to our hearts.

Investing in this modern, energy-efficient lighting solution has not only given the car park a completely new image, but also improved comfort and increased users' sense of safety with lighting that runs ahead of them. Working with nevalux always means asking for the best energy solution. We provide the answer and implement it together with the building owner, planners and installers, for the benefit of people and the environment.

"Since the lighting was renewed, the car park has gained in efficiency and quality. The swarm function improves comfort for users and increases their sense of safety. This innovative project, based on an intelligent lighting solution, has led to a significant reduction in energy consumption and therefore a marked reduction in electricity costs."

Laurent Maret, Project Manager, FIPOI Geneva

The RS PRO Connect series by steinel

The RS PRO Connect series by STEINEL

- Extremely energy-efficient
- Full flexibility in grouping
- Easy installation
- Invisible HF motion detector
- Adjustable range
- Configuration and networking via Bluetooth
- Adjustable brightness for main and base light
- Sense of safety thanks to neighbour function
- Optional emergency lighting module (R series)
- Updatable

Steinel RS PRO R20 BASIC

Steinel RS PRO 5100 SC Verso

Light is our passion, forward-looking lighting solutions our mission.

Intelligent lighting solutions that inspire people, and solutions that combine energy efficiency, safety and comfort: that is our task. To make the world a little brighter.

LIGHTING CONCEPTS

As solution developers, we support you personally and come to you on site: the best foundation for a perfect lighting solution.

PROJECT MANAGEMENT

Everything starts with an analysis. After solution-oriented planning, we manage the implementation of the entire project and coordinate the trades involved.

INNOVATION

As pioneers and lateral thinkers, we continuously develop our products and processes and fully exploit the potential of existing technologies.
